In partial fulfillment of academic requirements
for the course
CS 191 Software Engineering I
of the
1st Semester, AY 2015-2016

Unique Reference:

The documents are stored in the <https://github.com/kozloz/nesy>

Document Purpose:

The purpose of this document is to visualize the scenarios that may happen when the user tries to log in

Target Audience:

UP BikeShare users and members.

Revision Control*History Revision:*

Revision Date	Person Responsible	Version Number	Modification
09/17/15	Kevin Fernandez	1.1	Added use case specs for log in.

Use-Case Name: Log in account

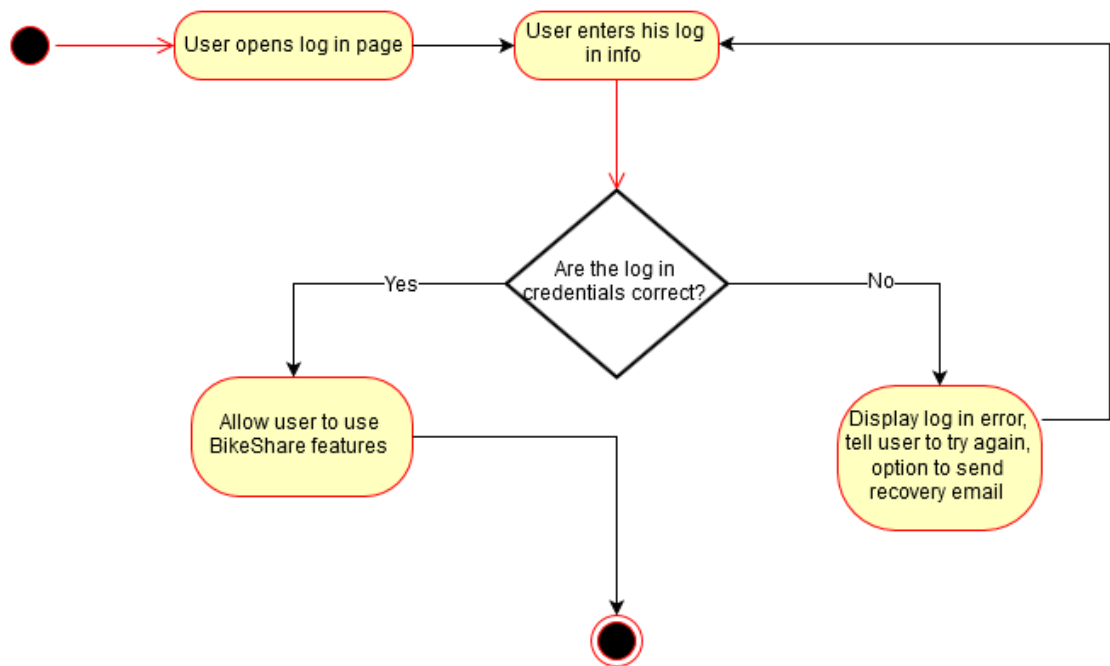

Description: For the user to be able to use the Bikeshare system, he must first be registered in the system. Afterwards he must log in his account to be able to use all the features in the system.

Preconditions: The user is already registered in the system.

Flow of Events:

Scenario Name	Description
Scenario 1 User logs into the web app	1. User opens the log-in page 2. User enters his log-in information 3. Account credentials are correct, user has access to Bikeshare system
Scenario 2 User logs into the web app	1. User opens the log-in page 2. User enters his log-in information 3. Account credentials are incorrect, message telling user that username or password is incorrect 4. User is sent back to the log-in page, with a link to get an email regarding changing his credentials

Activity Diagram of the Flow of Events:

Postcondition: Web app now displays in the reference of the user

Relationships: NONE

Special Requirements: NONE
